

## **STORELIGHT**

*Enjoy your patio also in the evening!*

*Lighting and heating system  
for solar shading*

**HAROL<sup>®</sup>**

## The ideal complement to your solar shading system

You can use the Storelight to create a unique atmosphere on your patio in the evening. The Storelight is available with an integrated heating system so you can enjoy evenings outdoors, for many hours. If the weather turns chilly, you can put on the independently switched heating system, and after that the evening's still young.

The attractive housing is made from thick-walled powder coated aluminium. You can choose a colour from the full RAL spectrum or the Harol Prestige colour range. That means you can match your Storelight exactly to your solar shading or intentionally select a playful contrast colour.

To create an ideal lighting, all halogen spots(\*) can be swivelled individually, up to  $\pm 25$  degrees in all directions.

The Storelight is available in standard lengths of 2.5 metres and 3.5 meters (only 2.5 meters if combined with heating). Each Storelight module is fitted with four 35 W spotlights. The version with heating has two infrared radiant heaters (1000 W each). These heaters can warm an area of approximately 16 m<sup>2</sup>.

Storelight modules are supplied pre-wired ready for use, including an integrated electronic transformer.\*\*)

The system has pivoting mounting brackets so the Storelight can be suspended from your solar shading system at the desired angle.

When the Storelight can not be fitted directly to the awning, we recommend attaching the system to the wall below the solar shade at an adequate distance (approximately 30 cm).\*\*\*) Separate brackets are optionally available for this purpose.

(\*) Cold-light reflector GU 5.3 - 12 V - 35 W

(\*\*) Max. 200 VA - 230 V - protection class IP 20

(\*\*\*) Minimum distance from side : 30 cm

Minimum distance from front : 100 cm

Installing the lighting system is done by fixing the brackets around the square bar (40 x 40 mm) of the awning.

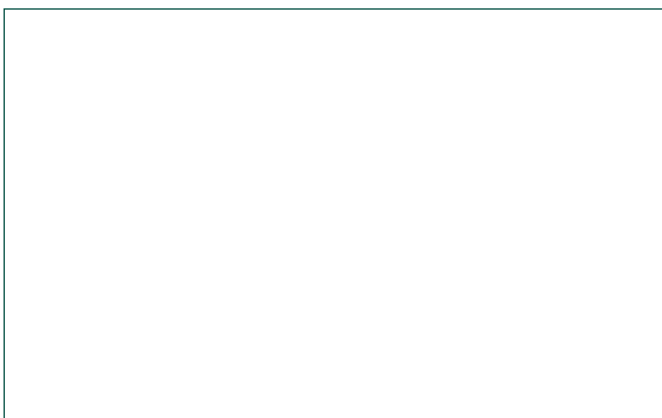

With cassette folding arm awnings the brackets are fixed directly to the awning box.

In case of Storelight with integrated heating we recommend attaching the system at an adequate distance from your solar shading system (min. 30 cm).

By means of special brackets (optional) you can also choose to attach the system straight to the wall.
