Annex : Drawings	page 12

Harol reserves the right to make alterations of the product without prior notice.

1. General

The VZ710 veranda sunblind is specially designed for installation above the veranda. The advantage of this type of installation is that the rays of the sun which cause excessive heat within the conservatory area, are prevented from striking the glazing.

The awning is rolled up in a roller box fixed to the side guides. These are attached to the conservatory mullions by means of a two-part system of fixing. There is an air space between the side guides and the awning. This is to ensure adequate ventilation for the area between the awning and the conservatory glazing. The system for attaching the sunblind side guides to the roof mullions is so designed as to enable an minor seating tolerances in the roof sections to be easily taken up. The entire system is made of non-corroding materials.

2. The profiles

2.1. Guides

- Material : extruded aluminium, powdercoated
- Colour: Consult the RAL colour chart.
- Two types :
 - * End guides : installed on outer sides, with a front rail slot on one side only
 - * Centre guides : installed centrally, with a front rail slot on either side
- The profiles have a channel into which the bracket support pins fit
- Aluminium extrusions coated to match the frame

2.2. The roller

- Material : a welded tube, formed from a steel strip Sendzimir-galvanised, with a groove for attaching the fabric
- Function : rolling the blind fabric up and down
- Diameters : $\varnothing 78 \times 1 \text{ mm}$
 $\varnothing 85 \times 1,2 \text{ mm}$ (standard for widths over 4 m).

2.3. The Fabric Clip profile

- Material : consists of extruded PVC clips
- Function : attaching the fabric in the fabric slot without the use of screws, so that the fabric can be removed from the front instead of sliding off sideways
- Diameter of the PVC fabric retainer : $\varnothing 3 \text{ mm}$
- Advantage : quick and easy fabric changing

2.4. The roller box

- Material : press formed from 1,2 mm thick pre-coated aluminium strip, and provided with a protective foil liner
- Colour : Consult the RAL colour chart.
- Dimension : 145 mm x 215 mm
- Consists of two sections :
 - * a removable chamfered upper section or cover
 - * a fix lower section
- An extra reinforcement support is fitted in the middle of each section

Fig. 1 : Guides

Fig. 2 : "Clip-on clip-off" profile

Exploded View
VZ710

HAROL

2.5. The Front Rail

- Material : extruded aluminium, powdercoated
- Colour: Consult the RAL colour chart.
- Function :
 - * The lower section : provided with 1 groove.
 - * The closing section : is clipped to the lower section
 - * This profile runs along the slots in the side guides

2.6. The Intermediate Roll(s) for the inclined surface

- Material : extruded aluminium tube Ø50 mm x 2 mm wall-thickness, powdercoated
- Function : Used to support the fabric on longer projections
 - * Over 5001 mm extension :
Included as standard and installed in the middle of the projection
 - * Projection smaller than 5001 mm :
Intermediate roll in option

3. Other components

3.1. The Consoles (or End Checks)

- Material : hydraulic cast aluminium
- Colour: Consult the RAL colour chart.
- Dimensions : 145x215 mm

3.2. The Carriages

- Material : cast PVC (Luran)
- Colour : standard black.
- Function :
 - * connection of front rail and side guides, fitted with two carriage wheels
 - * are mounted at the end of the front rail

3.3. The Tensioning System

- Material : the castors, axles, etc. are made of non-corroding materials
- Function : the entire fabric and front rail are kept under constant tension by means of a spring, a rope and a Ø2,5 mm cable
The constant spring tension ensures that the fabric remains taut in any position, to ensure adequate ventilation between the fabric and the glazing

3.4. Guide Fixing Brackets

Standard aluminium support A:

- Material: plastic, standard black.
- Options:
 - * aluminum version, with powder coating adapted to the colour of the frame.
- Function :
The attachment system is in two parts :
 - The upper part : Slides into the groove below the side and central guides
 - The lower part, exists in two versions :
Higher attachment point - low profile A :
 - For any type of glass-covered aluminium conservatory framework and for all wooden pergolas

Fig. 3 : Box

Fig. 4 : Front rail

Fig. 5 : Intermediate roll

Fig. 6 : Consoles

Fig. 7 : Carriage

and veranda systems

- Is screwed on to the wood or into the groove at the top of the mullions through the capping section into which the rubber seal is fitted. (mounting A)

Higher attachment point - high profile B :

- For all types of conservatories with the glass beneath where the mullions have an extended leg above the glazing
- Is fixed to the mullion with two bolts. (mounting B)

- Additional fixing possibilities :

- * If fixing methods A or B are not possible, an option is to fix against a wall (fig. 10). For this, angled profiles can be used in combination with flat attachment points A
- * The upper- and lower part fixings are slotted to allow for any minor seating tolerances in the roof section
- * The clearance between the guides and the mullion can be increased by means of extension point

- Important :

- * Please take into account that the verandaprofiles by means of extension point are under a higher load. They can only be used when there is no danger of them twisting
- * The maximum distance between two fixing points along a guide is max. 1600 mm
- * The supports are available in lengths of 120 mm, 200 mm, 300 mm or 400 mm

Remark : In case of an intermediate roll, the awning will be mounted on higher aluminium attachment points of 120 mm.

Mounting A for VZ710

Fig. 8 : Standard aluminium support

Mounting B for VZ710

Fig. 9 : Support

Fig. 10 : Mounting against the wall

Type	Maximum width in meters							Maximum surface	Number of elements	Number of motors
	1,5	3	4,5	6	9	13,5	18			
Type 1		1 part						18 m ²	1	1
Type 2			2 parts					36 m ²	2	1*
Type 3				3 parts				54 m ²	3	2
Type 4					4 parts			72 m ²	4	2

Tabel 1 : Technische mogelijkheden

(*)= also possible with 2 motors

3.5. Coupling two side guides.

To connect 2 veranda sunblinds, coupling parts are available

There are two options :

* The coupling plate :

- Material : Aluminium

- Function :

* The plate is placed underneath the 2 lateral guides. In the plate there are 4 holes provided for the securing screws, which slide into the groove of the guides (2 per guide), and so the plate is screwed down. In the middle of the plate there are 3 holes provided for the attachment point.

* When the attachment point is directly mounted to the left or right guide, the coupling will be done by mounting the plate behind the attachment point.

* The angle coupling :

- Material : Aluminium

- Function :

* The angle is placed underneath the 2 side guides. The horizontal surface, which is placed underneath the guides, has 2 holes for the screws. The screws slide into the grooves of the guides (1 per guide) and so the angle is screwed down.

* The vertical surface has 1 hole for fixing the attachment points type A or B.

* Only used when the attachment point is mounted in the middle.

* Coupling Duo Set :

- Consists of :

The coupling plate, the angle coupling and the attachment means

- Function :

* If the standard support is placed in the centre of the two side guides to be attached, the support upper shall be replaced by the coupling angle.

* When the standard attachment point is placed left or right on the guide, the coupling will be done independently of the attachment point, by mounting the coupling plate behind the attachment point.

Fig. 11 : Higher attachment points

Fig. 12 : Coupling plate

Fig. 13 : Angle coupling

4. Technical data

- Minimum width per blind : **1,5 m**
- Maximum width per section : **4,5 m**
- Minimum projection : **0,5 m**
- Maximum projection : **6 m**
- Maximum fabric area : **18 m²**
- Operating temperatures minimum 0°C and maximum 70°C

The different (box) sections are packed separately for connection on site.

5. Weight

Fig. 14 : Measuring and assembly

- The applied weight = **Width X 15 kg per meter (width)**

6. Operation

6.1. Motor operation

- The standard motor is the Sunea IO motor, without push buttons and controlled with an IO transmitter.
 - IO transmitter.
 - 5m electric cable.
- Option:
 - without IO wall transmitter.
 - electric cable 10m instead of 5m.
 - other types of motors : Orea WT

Prod. Type	MOTORTYPE	OPTION	SURCHARGE	CABLE LENGTHS		
				3M	5M	10M
VZ710	Sunea IO	A1281	-	-	S	X
	Orea WT	A2619	Minus price	S	X	X*

S: Standard X: Option

*: Without surface mounted switch

6.2. Automation

- Accessories :

- * Relay boxes
- * Wind-and-Solar control
- * Time switches
- * Remote control
- * ...

(For this, see the Harol-Domotics-map)

7. Fabric cover

Choice between two qualities :

7.1. Acrylic

- Composition : Spun dyed Acrylic fibre coloured in the mass
- Colour : Patterns and colours from the standard collection
- Weight : +/- 290-300 gr./m²
- Thickness : +/- 0,5 mm
- Confection : Patterned in vertical rows of 1200 mm, side hems of 10mm width, double step stitch with polyester thread.
- The fabrics are treated for rot and mould, and have waterproof and dirt-repelling qualities.
- Each fabric-track is fitted with a Ø10 mm ring at the bottom for water drainage.

7.2. Soltis

- Composition : Polyester threads, enclosed at both sides with PVC
- Colour : A range of solid colours from the standard collection
- Weight : +/- 330-350 gr./m²
- Thickness : +/- 0,4-0,45 mm
- Confection : Patterned in vertical rows of 885mm, side hems of 40mm width, welded
- The fabrics have excellent ventilation qualities, provide an outward view and are very easily cleaned

Due to the tension on the fabric, a cracking sound may be emitted during extending and retracting the awning.
Causes:

1. air being squeezed out from between the layers of fabric
2. the cord jumping on the pulley

8. Measuring and assembling

8.1. Guidance for correctly measuring awnings

- The total width = centre of side guide to centre of side guide. The outside of the box is always 40mm (2x20mm) larger than the middle of the guide rail or the middle of the attachment points
- The projection : measured from the back of the roller box at the top against the wall to the front of the guide, included the cover
- Attention : the extension pole always stops before the covering cap, this means at minimum 63mm of the end of the guide rail
- Note : the width of the roller box is always 40 mm more than the over-all width of the blind. (see figure 14 page 9)

8.2. The assembly

- Check the attachment points (item 3.4)

Attention : The maximum distance between two attachment points of a guide is 1600 mm
The maximum overhang beyond the glazing is 500 mm

9. Colours

- Consult the RAL colour chart
- The carriages for a blind in RAL-colours are always black

10. Fixings

All fixings are of stainless steel and always included

11. Packing

The sunblinds are totally wrapped in solid carton

12. Use and maintenance

Regular use and maintenance greatly increase the life of the sun awning.

- Do not use the awning as a rain or wind awning.
- Regular maintenance of the awning prevents unnecessary wear or problems with the function.
- Cleaning of the frame : use warm water with a light detergent instead of abrasive substances (to prevent damage to the coatings and protective layers)?
- Cleaning of the fabric : dry with a stiff brush.
- Stubborn stains : a warm water and light detergent solution, rinse with copious amounts of clean water.
- Let the awning dry fully before rolling it up (even after an unforeseen rain shower).

13. Security

For a secure installation it is recommended to mount the awning in accordance with the fitting instructions
